

The Psychosociology of Management (Economy and Society)

The mainstay of the book is formed by an analysis of organizational culture, public administration services, the management in the relationship manager-society, and organization as a human community life. This research makes conceptual and methodological contributions to public relations management, the rapport between human, organization, and environment, the organizational phenomenon, and communication in organizations. These findings highlight the importance of examining behaviors towards the organization, sociocultural models of management, and the knowledge driven society. My analysis complements the growing literature on communication in public administration, the relationship between social actors and organizations, and sociocultural space of the markets.
